

Incentives

Our expertise in serving large customers, competitive power pricing and energy efficiency incentives provide unique value in meeting the needs of your business.

Economic Development Rates

New and existing commercial and industrial customers who meet additional load requirements may qualify for special economic development rates. Discounts apply to customers with over 350kW of expanded electricity use and last for five years. Additional growth can also qualify for separate rate discounts.

Energy Design Assistance

The best time to consider energy-efficient options for equipment is in the earliest stages of building design. Our Energy Design Assistance program helps you include energy savings in the planning and design phase of your project. The more energy you save, the more you can earn in incentive dollars and the more you'll save on future energy bills.

Data Center Efficiency

Whether you are building a new data center or looking to make energy efficiency improvements to an existing data center, Xcel Energy can help. Eligible businesses can qualify for energy efficiency study rebates and custom rebates up to \$400 per kilowatt saved for preapproved projects and prescriptive rebates for EC motor plug fans and plate and frame heat exchangers.

Customized Energy Solutions

We offer solutions for electric and natural gas business customers through our suite of energy-efficient and energy management products that will help you increase your company's energy efficiency, reduce operating costs and improve your bottom line.
