Santa Fe, New Mexico 87501

**Re: Proposed Electrical Transmission Line, New Substation and Substation  
Improvements, Curry and Roosevelt Counties, NM**

Dear Ms. Biella:

Southwestern Public Service Company, a subsidiary of Xcel Energy, proposes to construct two 230-kilovolt single-circuit transmission lines, a new substation, and improvements to an existing substation in the vicinity of Clovis, New Mexico. The area is depicted in the attached figure. The purpose of the proposed project is to mitigate overloads and voltage conditions, and improve reliability of the existing transmission system in the region. The planned route is proposed to be constructed mostly on private lands in late 2013 and 2014.

This project is applying for a Certificate of Convenience and Necessity with the New Mexico Public Regulation Commission. As part of the application process SPS has authorized an assessment of the environmental effects that could occur as a result of the proposed project, hence the reason for this letter to your office.

TRC Environmental Corporation (TRC) has begun collecting background data to support various permits and planning documents required for constructing the proposed transmission line. TRC has recently completed a field inspection of the proposed transmission route to identify any constraints in the project area. Although no major concerns were identified, we wanted to reach out to your agency to ask for any comments or concerns you may have about the proposed project.

If you require additional information please feel free to contact me at (505) 761-0099.

Sincerely,  
TRC

Howard Higgins, PhD  
Vice President  
TRC Environmental Corporation

Erin,

From our conversation the other day, it appears that your project near Clovis, New Mexico does not appear to have an air emissions source that will need to receive an air permit. In the event that your project will require an air permit you should contact the New Mexico Environmental Health Department to process your application. Any other environmental applications should be coordinated through the New Mexico State Agencies.

**To:** Marette, Brandon (Littleton, CO-US)  
**Subject:** RE: survey?

Mr. Marette,

There are no specific for a survey of New Mexico state threatened or endangered species under the New Mexico Wildlife Conservation Act.

A pertinent statute for compliance regarding take of endangered species would be 17-2-41 NMSA, which states that it is illegal to take (harass, hunt, capture, kill, or attempt to do so) any endangered species. There is nothing in New Mexico state law or regulation analogous to the federal Section 7 consultation requirements. Some project proponents do conduct surveys for state-listed species to ensure that take does not occur, but the state laws and regulations regarding endangered species are not nearly as prescriptive regarding preventive measures as those regarding compliance with the take provisions.

I hope this helps. Feel free to let me know if you have any other questions about this.

Chuck

SUBJECT: Action No. SPA-2011-00534-ABQ, Electrical Transmission Line, New Substation & Improvements near City of Clovis, Curry & Roosevelt Counties, New Mexico

Howard Higgins  
TRC Environmental Corporation  
4221 Balloon Park Road NE Ste A  
Albuquerque, New Mexico 87109-5809

Dear Mr. Higgins:

The U.S. Army Corps of Engineers (Corps) is in receipt of your letter dated November 14, 2011 concerning Southwestern Public Service Company's proposal to install electrical transmission lines, a new substation and improvements near the City of Clovis, Curry & Roosevelt Counties, New Mexico. The activity involves construction of two 230-kilovolt single-circuit transmission lines, a new substation and improvements to an existing substation. We have assigned Action No. SPA-2011-00534-ABQ to this activity. To avoid delay, please include this number in all future correspondence concerning this project.

A Department of the Army permit is required under Section 404 of the Clean Water Act for the placement of dredged or fill materials into waters of the United States. The project site may contain waters of the U.S. If the project proponent or any of its contractors work, or plan to work, in a river, stream, or wetland, they may be required to obtain a Department of the Army permit.

I have enclosed a brochure describing the Corps regulatory program for your information. A series of nationwide permits are available which may be sufficient for some work, if all terms and conditions are met. Many of the nationwide permits require pre-construction notification to the Corps of Engineers and regional conditions may apply. In many cases, a water quality certification is required from the appropriate water quality authority.

We will provide a letter of determination of permit requirements on request, provided that we are furnished with information sufficient to determine whether waters of the United States would be affected by the proposed project. Summaries of the nationwide permits and information about the regulatory program are available on our web page at [www.spa.usace.army.mil/reg/](http://www.spa.usace.army.mil/reg/)

If you have any questions concerning our regulatory program, please contact me at 505-342-3185 or by e-mail at [Jennifer.J.Lillard@usace.army.mil](mailto:Jennifer.J.Lillard@usace.army.mil). At your convenience, please complete a Customer Service Survey available on-line at <http://per2.nwp.usace.army.mil/survey.html>.

Sincerely,

A handwritten signature in black ink that reads "Jennifer J. Lillard". The signature is written in a cursive, flowing style.

Albuquerque, New Mexico 87113

**Re: Proposed Electrical Transmission Line, New Substation and Substation Improvements, Curry and Roosevelt Counties, NM**

Dear Ms. Hill:

Southwestern Public Service Company, a subsidiary of Xcel Energy, proposes to construct two 230-kilovolt single-circuit transmission lines, a new substation, and improvements to an existing substation in the vicinity of Clovis, New Mexico. The area is depicted in the attached figure. The purpose of the proposed project is to mitigate overloads and voltage conditions, and improve reliability of the existing transmission system in the region. The planned route is proposed to be constructed mostly on private lands in late 2013 and 2014.

This project is applying for a Certificate of Convenience and Necessity with the New Mexico Public Regulation Commission. As part of the application process SPS has authorized an assessment of the environmental effects that could occur as a result of the proposed project, hence the reason for this letter to your office.

TRC Environmental Corporation (TRC) has begun collecting background data to support various permits and planning documents required for constructing the proposed transmission line. TRC has recently completed a field inspection of the proposed transmission route to identify any constraints in the project area. Although no major concerns were identified, we wanted to reach out to your agency to ask for any comments or concerns you may have about the proposed project.

If you require additional information please feel free to contact me at (505) 761-0099.

Sincerely,  
TRC

Howard Higgins, PhD  
Vice President  
TRC Environmental Corporation

cc: Kelli Boren, SPS

Thank you for your recent request for information on threatened or endangered species or important wildlife habitats that may occur in your project area. The New Mexico Ecological Services Field Office has posted lists of the endangered, threatened, proposed, candidate and species of concern occurring in all New Mexico Counties on the Internet. Please refer to the following web page for species information in the county where your project occurs: [http://www.fws.gov/southwest/es/NewMexico/SBC\\_intro.cfm](http://www.fws.gov/southwest/es/NewMexico/SBC_intro.cfm). If you do not have access to the Internet or have difficulty obtaining a list, please contact our office and we will mail or fax you a list as soon as possible.

After opening the web page, find New Mexico Listed and Sensitive Species Lists on the main page and click on the county of interest. Your project area may not necessarily include all or any of these species. This information should assist you in determining which species may or may not occur within your project area.

Under the Endangered Species Act of 1973, as amended (Act), it is the responsibility of the Federal action agency or its designated representative to determine if a proposed action "may affect" endangered, threatened, or proposed species, or designated critical habitat, and if so, to consult with us further. Similarly, it is their responsibility to determine if a proposed action has no effect to endangered, threatened, or proposed species, or designated critical habitat. On December 16, 2008, we published a final rule concerning clarifications to section 7 consultations under the Act (73 FR 76272). One of the clarifications is that section 7 consultation is not required in those instances when the direct and indirect effects of an action pose no effect to listed species or critical habitat. As a result, we do not provide concurrence with project proponent's "no effect" determinations.

If your action area has suitable habitat for any of these species, we recommend that species-specific surveys be conducted during the flowering season for plants and at the appropriate time for wildlife to evaluate any possible project-related impacts. Please keep in mind that the scope of federally listed species compliance also includes any interrelated or interdependent project activities (e.g., equipment staging areas, offsite borrow material areas, or utility relocations) and any indirect or cumulative effects.

Candidates and species of concern have no legal protection under the Act and are included on the web site for planning purposes only. We monitor the status of these species. If significant declines are detected, these species could potentially be listed as endangered or threatened. Therefore, actions that may contribute to their decline should be avoided. We recommend that candidates and species of concern be included in your surveys.

Also on the web site, we have included additional wildlife-related information that should be considered if your project is a specific type. These include communication towers, power line safety for raptors, road and highway improvements and/or construction, spring developments and livestock watering facilities, wastewater facilities, and trenching operations.

Under Executive Orders 11988 and 11990, Federal agencies are required to minimize the destruction, loss, or degradation of wetlands and floodplains, and preserve and enhance their natural and beneficial values. We recommend you contact the U.S. Army Corps of Engineers for permitting requirements under section 404 of the Clean Water Act if your proposed action could impact floodplains or wetlands. These habitats should be conserved through avoidance, or mitigated to ensure no net loss of wetlands function and value.

The Migratory Bird Treaty Act (MBTA) prohibits the taking of migratory birds, nests, and eggs, except as permitted by the U.S. Fish and Wildlife Service. To minimize the likelihood of adverse impacts to all birds protected under the MBTA, we recommend construction activities occur outside the general migratory bird nesting season of March through August, or that areas proposed for construction during the nesting season be surveyed, and when occupied, avoided until nesting is complete.

We suggest you contact the New Mexico Department of Game and Fish, and the New Mexico Energy, Minerals, and Natural Resources Department, Forestry Division for information regarding fish, wildlife, and plants of State concern.

Thank you for your concern for endangered and threatened species and New Mexico's wildlife habitats. We appreciate your efforts to identify and avoid impacts to listed and sensitive species in your project area.

Sincerely,

Wally Murphy  
Field Supervisor
