Aerial Photography: Provided by US Department of Agriculture
Map data and other geographic information: Date 2014
Source: NAD83/NAIP2014_10_10_10

Parcel Boundaries: Provided by Contract Land Map
Accuracy for NAD83 2014 imagery is approximately 100 feet.

Sensitive cultural resource data are not shown on this map as these data are not to be reproduced,
distributed, or released to the public.

Some data layers including tract boundaries, pipelines, roads, and other pipelines obtained from
third party sources may be subject to change without notice. These data have not been compared
to all locations and should be used as a general guide to feature locations only. Integration of
projected boundaries to the map was performed based on the best interpretation of these features.

Some legend symbols are enlarged for easier identification.

Some features are exaggerated to better identify existing opportunities.

This map provides an overview of the approximate location of the proposed 345-kV line, based on the
information available at the time of the completion of the study. Once a route is selected
and approved by the Public Utility Commission, the proposed route will be
subject to modification after access to property has been granted and on-the-ground
survey data have been collected to identify existing constraints and to determine the full scope of
project constraints.
