

Project overview

The proposed Bailey to New Amherst to Lamb 115 kilovolt (kV) transmission line project consists of approximately 40-50 miles (depending on the route approved by the Public Utility Commission of Texas) of new 115 kV transmission line between the existing Bailey County Interchange located near Muleshoe, Texas, the Bailey County Pump Station, the Sudan Rural Substation, the proposed New Amherst Substation, and the Lamb County Interchange near Littlefield, Texas. The project also includes upgrades to the Bailey County Pump and Sudan Rural Substation.

Project need

The pr a

Structures installed for the line will vary depending on their placement along the line and typically range from 75 to 120 feet tall.

Proposed Route Segments
